Vectra AI NDR + Lumifi

Gain expert-level detection capabilities without overwhelming analysts

Network detection and response platforms give security teams unprecedented situational awareness when responding to threats. Analysts use these tools to achieve complete situational awareness, correlating security events between on-premises assets, cloud-distributed workloads, remote workers, and more.

Vectra AI NDR scores, ranks and reveals the most critical threats in your hybrid network with the industry's only Attack Signal Intelligence. Vectra tracks activity across the cyber kill chain to expose the complete attack narrative for over 90% of MITRE ATT&CK techniques

With 11 references in the MITRE D3FEND framework — more than any other vendor — only Vectra AI provides a Network Detection and Response (NDR) solution powerful enough to give you an unfair advantage over attackers.

Expand your network visibility and security with Lumifi product expertise

Gain 24/7 Coverage

Our security operations staff includes highly trained Vectra product experts working in a fully-compliant SOC II Type II-certified operations center.

Customize Your Deployment

Lumifi has developed 1800+ custom rules for detecting known and unknown threats across multiple environments.

Fast-Track Tech Implementations

Our team has years of experience configuring and deploying the world's most advanced technologies in complex enterprise environments.

Leverage The Glass Box Approach

We provide our customers with unlimited visibility and absolute control over their data, with no risk of vendor lock-in.

Trust Award-Winning Security Leaders

Our industry-leading approach to managed detection and response has earned us multiple awards and a renewal rate of almost 100%!

ShieldVision™

Enhances event investigation with context and guidance by leveraging Vectra's network visibility to aggregate EDR, NDR, and SIEM data for real-time threat insights.
